

This issue seriously affects over-the-road truck drivers of which I am one. We rely heavily on these news and traffic reports to keep everyone safe. This seems similar to the satellite tv service which required us to get "permission" from our local affiliates to receive satellite tv. We had no choice using this system in the truck all over the country. There are people who are not trying to bypass any rules but there are exceptions like with my occupation. I understand the local advertisers would not get much airtime if everyone went satellite with tv or radio but that will need to be worked out.
